

Understanding ILAC: International Recognition and Advantages of Ikonix Calibration Services

The International Laboratory Accreditation Cooperation (ILAC) is an alliance composed of laboratories and certification bodies from multiple countries and regions*, such as the Korea Laboratory Accreditation Scheme (KOLAS), the Singapore Accreditation Council (SAC), and the American Association for Laboratory Accreditation (A2LA). These members sign Mutual Recognition Arrangements (MRAs) under ILAC, ensuring that testing and calibration results from laboratories accredited to ISO 17025 standards (and its updates) are internationally recognized for their consistency and acceptance.

Ikonix ISO 17025 Calibration Laboratory

Ikonix's calibration laboratory is accredited by the prestigious U.S. accreditation body, A2LA, meeting the ISO 17025 laboratory quality management system certification standards. This accreditation ensures the quality and effectiveness of testing services and results. A2LA holds significant influence and recognition in the North American and European markets, allowing companies using A2LA-accredited laboratory reports to gain quicker international recognition and establish higher trust with international clients. This is crucial for multinational corporations and export-oriented industries.

5 Reasons Why You Should Choose Calibration with Ikonix:

1 Rapid Turnaround

Fast 5-business-day calibration. If the instrument requires repair during the calibration process, the 5-business-day period will restart, covering both repair and calibration.

2 Cost Saving

One-stop service for verification, calibration, and adjustment. Eliminates the need to worry about sending for recalibration if the verification fails.

3 Traceability and Accuracy

We provide certification ensuring that calibration, measurements, and adjustments are not only accurate but traceable to a National Institute of Standards and Technology (NIST).

4 Full-Scope Calibration

Calibration is based on Ikonix's instrument specification scope, ensuring thorough calibration and adjustment across all measurement ranges.

5 Extended Warranty

Annual calibration with us qualifies your tester beyond the original 5-year warranty through its extended warranty program.*

*The extended warranty program also covers the unit for 5-years beyond the instruments discontinued date.
